

Introduction of Broadcast

As the name suggests, Broadcast is used to broadcast all Widgets

Usage of Broadcast

Add Widget ▾SaveWidget layout

Choose a widgetTemplate file to loadBrowse

Air Conditioner A

20

setget

Air Conditioner B

20

setget

broadcast

localhost:8080/WindowsAppIndex.html/?%7B"edit"%3A%7B"type"%3A"VarBroadcast"%2C"url"%3A"%24temperature%24"%2C"index...

localhost:8080/WindowsAppIndex.html/?%7B"edit"%3A%7B"type"%3A"VarBroadcast"%2C"url"%3A"%24temperature%24"%...

VarBroadcast Enter the Thing in the input box below, click 'POKE' to get the parameters

url: \$temperature\$ POKE ParseUrl

fontSize 22

title

titleSize ▾

Params temperature 20

Finish Apply

For example, there are 200 air conditioners in a factory, all have to be set to 20 degrees Celsius. It is too troublesome to change one by one. At this time, you can broadcast the changes.

Whether the object to be changed is a value, a path, or a parameter, enter **\$the corresponding name\$** in the broadcast url, click poke button, enter the value below, and finally click apply.

You can change **\$the corresponding parameters\$** values in all other widgets.

No matter what you want to change, as long as the value in \$\$ can be matched, it will be changed by broadcasting.

localhost:8080/WindowsAppIndex.html/?%7B"edit"%3A%7B"type"%3A"VarBroadcast"%2C"url"%3A"%24aa%

localhost:8080/WindowsAppIndex.html/?%7B"edit"%3A%7B"type"%3A"VarBroadcast"%2C"url"%3A"%24

VarBroadcast

Enter the Thing in the input box below,

click 'POKE' to get the param

url:

\$aa\$

POKE

ParseUrl

fontSize

22

title

titleSize

Params

aa

33

Finish

Apply

For example, if you want to broadcast a meaningless params named \$aa\$

Air Conditioner B

undefined

del

edit

set

get

localhost:8080/WindowsAppIndex.html/?%7B"edit"%3A%7B"url"%3A""%2C"parseUrl"%3A"%2Fair%2F%24aa%24"%2C"se...

localhost:8080/WindowsAppIndex.html/?%7B"edit"%3A%7B"url"%3A""%2C"parseUrl"%3A"%2Fair%2F%24aa%24"...

config

Enter the Thing in the input box below,

click 'POKE' to get the parameters

url:

/air/\$aa\$

POKE

ParseUrl

title

Air Conditioner B

titleSize

is-small

fontSize

25

Params

aa

33

hide

Finish

Apply

When you open the Edit interface of other widgets, you find that the value of \$aa\$ has been changed.
